	VELOCITY	
	Velocity fin is designed with unique Power Enhancing Vents (PEV's). The PEV's do just that.. enhance the power of the fin During the fin stroke, water flow is directed through the PEV's. This helps reduce the stress on the divers leg while accelerating water over the blade; resulting in increased velocity. Water movement through the PEV's reduce lateral movement of the fin, increasing the efficiency of the kick.
